How ActivePure® Technology is Different

*Air purifiers generally fall into two categories: **Active-Based** or **Capture-Based***

Active-based: As the name suggests, ActivePure® Technology is an active-based disinfection solution, which enables Aerus devices with ActivePure® Technology to not only disinfect and purify the air but surfaces as well. ActivePure® patented technology uses free oxygen and water molecules and converts them into powerful oxidizers, known as ActivePure® Molecules, that are released back into the room, filling the interior space with ActivePure® Molecules that continuously seek out and destroy the room's pathogens and contaminants in real time, 24 hours a day.

Capture-based: air purifiers do not work in real time and are only effective against the contaminants that are captured and killed through a HEPA filter, carbon or ultraviolet light. These units, by design, are only partially effective at reducing some of the airborne pathogens and are not effective at treating pathogens on surfaces. Other devices, such as bi-polar ionization, have questionable results as indicated by the Centers for Disease Control (CDC) and the American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE).

HOW ACTIVEPURE TECHNOLOGY WORKS

The science behind this technology is incredible.

STEP 1:

Microscopic oxygen and water molecules in the air enter ActivePure equipped air purifiers

WATER AND OXYGEN ARE ABSORBED BY THE ACTIVEPURE HONEYCOMB MATRIX

STEP 3:

When they're released back into the air, the supercharged ActivePure molecules seek and rapidly destroy contaminants, fungi, mold, and odor-causing bacteria

STEP 2:

They pass through the ActivePure honeycomb matrix and transform into friendly-yet-powerful oxidizers
